

Guia d'inicialització:

1r Pas: Clonar el repositori

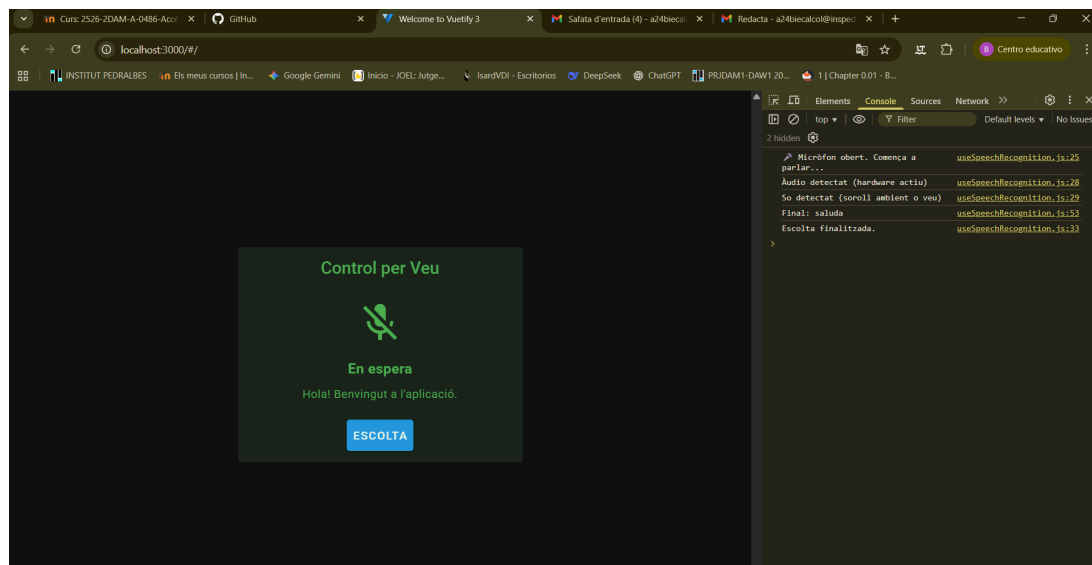

- git clone https://github.com/a24kimgalgal/voice-commander-electron
- cd voice-commander-electron

2n Pas: Iniciar l'aplicació en local

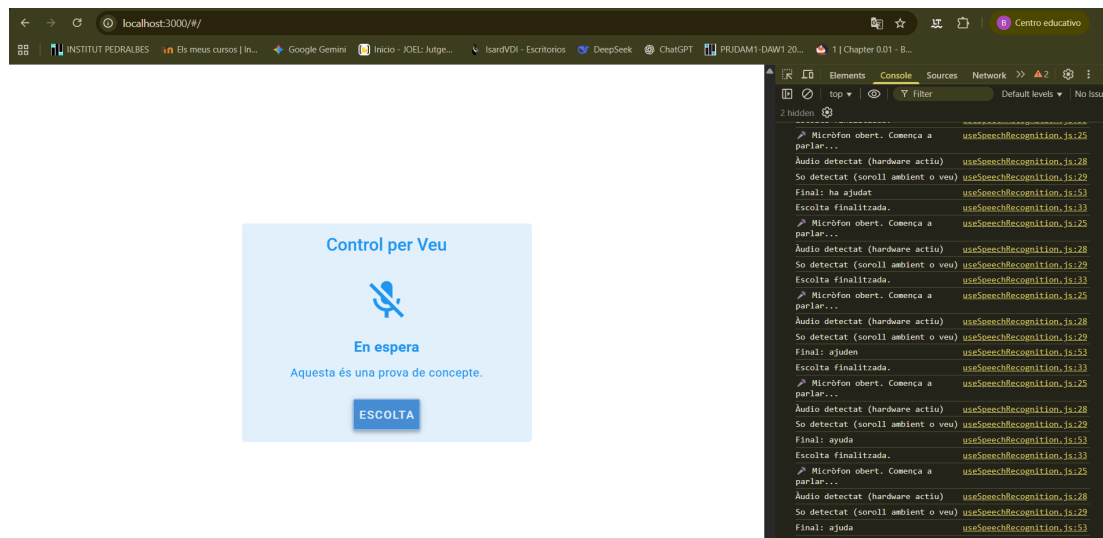

- cd Voice-app
- npm install
- npm run dev

Captures:

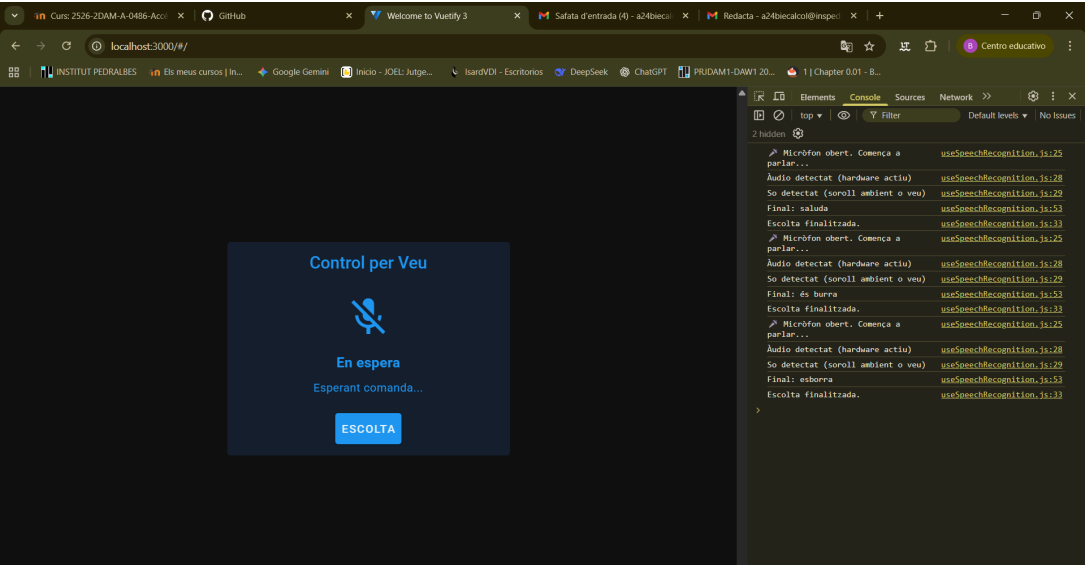

- saluda:

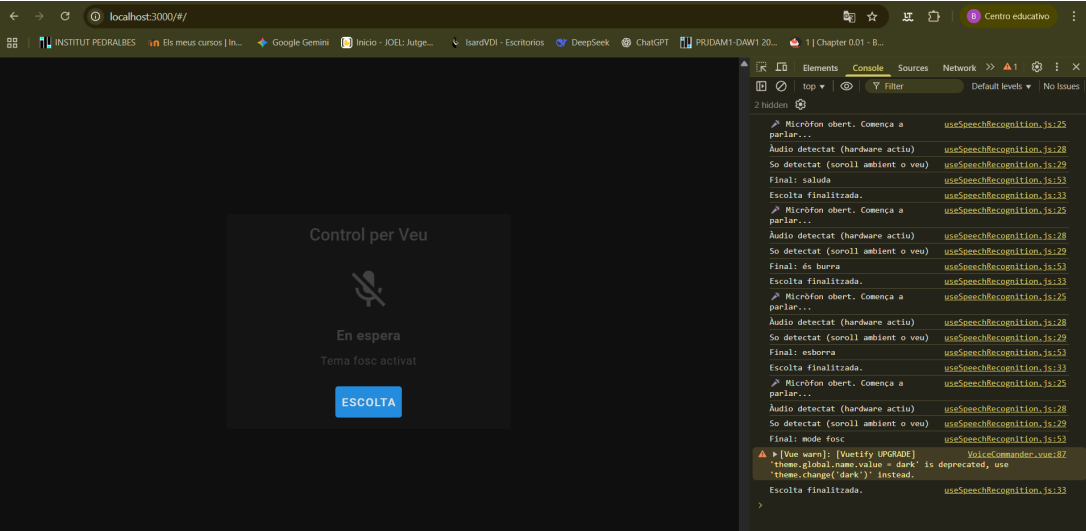

- ajuda:

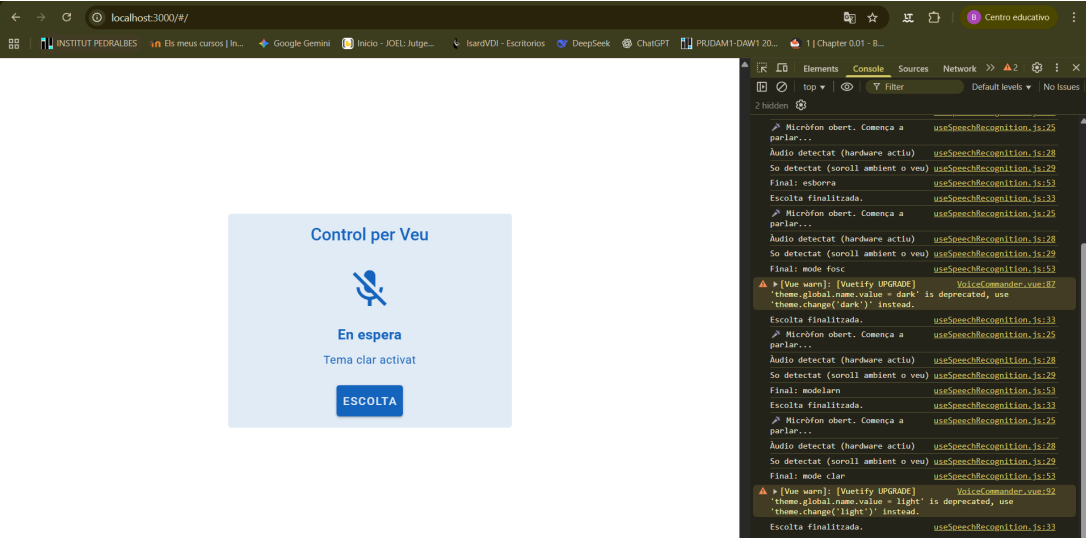

- esborra:

- mode fosc:

- mode clar:

- Comanda no reconeguda:

The screenshot displays a web browser window at localhost:3000/#/. The main content area shows a voice control interface with the following text:

- Control per Veu
- En espera
- Comanda no reconeguda
- ESCOLTA

The browser's developer console is open, showing a series of log messages from the Speech Recognition API. The messages indicate a sequence of events: audio detected, ambient noise detected, final mode set to 'clar', listening finished, microphone open, and audio detected again. This cycle repeats several times. A warning message is also visible: [Vue warn]: [Vueify UPGRADE] 'theme.global.name.value = light' is deprecated, use 'theme.changes('light')' instead.
